
face glued to the rear panel (z = 0)

Section detail, 4:1 (not to scale with the plate)

DISPLAY CASE v2 - ALUMINIUM SPINE (VESA carrier)

Material: aluminium 6061-T6 (5052 OK), 3.0 mm. Qty 1. Deburr all edges.

Outline 160 × 130, R6 corners. Drawing is 1:1 on A4 (also a drilling template).

Laser cut: outline + 4 x Ø3.3 (+ 8 x Ø2.7 if accepted).

After cutting: tap the 4 x Ø3.3 holes M4 × 0.7 THROUGH (plain M4 tap, cutting fluid). Countersink the 8 x Ø2.7 holes 90° to Ø4.8 on ONE face = the LCD side. The other face is epoxied to the rear panel.

VESA screw: M4 must stick out <= 5.5 mm past the arm plate (M4 × 8 with the portable stand's plate gives 4.4). Longer reaches toward the LCD.

Plate is symmetric: any orientation, only the countersink face matters.
